NATURAL STARCH CUTLERY

MADE FROM CORN
AND POTATO

BIODEGRADABLE

REUSABLE

HIGH HEAT RESISTANT

WHY USE VEGWARE?

The impact of our daily lives is not always visible. An oil-based plastic fork has been 180,000,000 years in the making, and will spend hundreds more in a landfill site.

By contrast, the raw materials for our cutlery are grown in a season and biodegrade in 180 days.

OUR PHILOSOPHY

By harnessing technology in creative ways, we can reduce the impact of today's consumer society. Our products are made from plants. By choosing natural materials, we can reduce pollution, the use of finite resources, and the amount of waste which must be disposed of in landfill.

CUTLERY FACTS

Our cutlery is high-heat resistant, so ideal for hot/wet foods, and tough enough for dense foods such as raw vegetables. Stored in a dry environment, there is no known limit to its shelf-life. When exposed to moisture and naturally occurring microorganisms, biodegradation takes only 180 days.
